# Intuitive Quality & Safety Management

For Airlines / Business Jet Operators / Helicopter Operators / Airports / MROs / UAVs

ASQS

IQSMS is a web-based Safety, Quality and Risk Management System developed by a team of aviation experts and experienced IT professionals, based on and in compliance with applicable national and international regulatory requirements and industry standards.

The IQSMS Suite currently consists of 3 Core Modules for all aviation businesses and 7 Extension Modules to support all aspects of their daily operations. The entire suite is continuously optimized and refined to provide the highest level of support to our customers around the globe.

3 Core Modules.
Suitable for all aviation businesses.

Quality Management

The IQSMS Quality Management Module is an industry proven tool that supports Quality and Compliance Management departments by significantly reducing their daily administrative workload.

Reporting

The Reporting Module covers the entire hazard and occurrence reporting process for flight, cabin and ground operations, training, continuing airworthiness, maintenance, occupational health and safety.

Risk Management

The IQSMS Risk Management Module ensures a pro-active approach to Risk Management. Your Risk Register is automatically kept up to date and you obtain clear visibility of your current top risks. Risk Assessment and Management of Change made easy.

Offline Apps ensure operational continuity, The IQSMS offline apps for mobile devices allow you to create reports, perform audits and self-inspections even when the internet connection is poor. All data entered in the offline system is automatically transferred to the IQSMS server as soon as an internet connection is available.

7 Expansion Modules.
As diverse as your daily business.
